

COLLEGE OF COMPUTING AND SOFTWARE ENGINEERING

Department of Computer Science

CS 4322 01 MOBILE SOFTWARE DEVELOPMENT

SPRING 2026

## Project Guidelines

According to the course syllabus, **30%** of the final grade is based on a group project.

**Group size:** Maximum 5 team members.

The project should include the following:

1. Midterm Project Report – 15 Points – Due on March 16th, 2026.
2. Project Report -7 Points – Due on April 27th, 2026.
3. App Demo and Code Walkthrough - 7 Points – Due on April 27<sup>th</sup>, 2026.
4. Reviewer questions and comments in code walkthrough – 1 point – Due on April May 1st, 2026

## Project report:

Project report submissions should include the following in 'Project Report' in the 'Assignments' tab by April 27<sup>th</sup>, 2026, 11:59 PM

1. a pdf file,
2. code files (zipped),
3. App demo and code walkthrough video file.

# Project Report Structure

1. Title page
2. Acknowledgments
3. Abstract - that summarizes the main idea of the project and its contributions.
4. Main text
  - a. Introduction
  - b. Literature review
  - c. Methods
  - d. Results
  - e. Discussion
  - f. Conclusion
  - g. Recommendations
5. References
6. Appendices

## Title Page

You should include the

1. Title of the project,
2. Group members' names, and
3. KSU IDs.

## Acknowledgments

You should acknowledge the assistance given to you by your supervisors, and any other person or organization that has helped you in the planning, conduct, analysis, or reporting of your project.

## Abstract

This is a synopsis of your project's aims, objectives, background literature, methods, results, key conclusions, and recommendations. This should be 250–300 words long and should be very clear and easy to follow.

## Main text

### Introduction

In this section of your report you introduce the subject, provide the background to the topic or problem (i.e. what is already known), outline the study question (or problem or study hypothesis), and outline the aims and objectives of your study.

### Methods

This section includes the methodology of your project layouts used, Composables created, Visual design software used, MainActivity class contents, Navigation controller usage, intents (external, internal) used, UI tests, helper functions required, data management and analysis methods Models you use, and why you choose those models, statistical analysis and tests.

### Results

In this section, you present the results. This section includes such information as descriptive data dealing with your study population, response rates, etc., and results of statistical analysis. Tables, figures, and graphs are an excellent means of presenting this sort of information. All tables, figures, and graphs should be numbered consecutively throughout the whole report and labeled with a clear and concise descriptive title.

**Add images of each screen in the app in a clear flow chart. The navigation chart and details should be presented clearly.**

### Discussion

In this section, you interpret your results and discuss their implications. Any limitations in your methodology should also be referred to here. Examiners expect you to acknowledge these limitations as an integral part of your evaluation of your project.

### Conclusion

This section summarizes the key results and the conclusions that you can draw from these results. It also needs to reflect what your initial project aims and objectives were.

### References

This is a list of all the references and sources you used in your literature review, methodology, and discussion. This includes books (monographs), journal articles, letters, abstracts, conference and symposium papers, media articles, and any form of published literature or comment. This also includes

citations for computer analysis packages, online literature, sources, and any audiovisual resources you may have researched or cited. It is important that every claim of scientific fact you make is supported by a valid, relevant, accessible reference, and that every idea or argument, and every verbatim quotation or paraphrase of someone else's work, is correctly attributed to its source.

### Appendices

Should include the code files, demo, and code walk-through video

## APP Demo – Code Walkthrough in the discussion post:

Submit the following in the 'Project Demo – Code Walkthrough' discussion post – **7 Points** by April 27th 11:59 PM

1. a video of the team presenting your project, including the 'App demo', a detailed code Walkthrough, and
2. code files

The presenter leads other team members through their code, explaining the code's functionality, design choices, logic, and design, and inviting feedback and questions to identify potential issues and improve the code's quality. The primary goal of this code walkthrough is to improve code quality by ensuring the code is understandable and verifying that it meets the design requirements.

Students who are not part of the group project (reviewers) should review the code and post at least one question and/or observation as a response post to the original discussion post. **(1 Point)** Due by May 1st 11:59 PM

The reviewers can ask questions, suggest improvements, and point out potential errors or areas of concern.

### Bonus Point:

Response to the questions and comments. - 1 bonus point to the person who responds. - Due by May 3rd 11:59 PM
